PRIMA EDIZIONE
ROMA 14 OTTOBRE 2026

to Rocco, Vittoria, Matilda and Alessandro immense treasures.

to Gemma, a hard worker who will be appreciated!

to Julia that has tremendously encouraged me to public my physical and mathematical models of natural phenomena.

INDEX

17	<i>Symbols</i>
45	<i>Physical constants</i>
47	<i>Parameter values and physical quantities treated</i>
61	<i>Foreword</i> <i>World curiosity – science and technology</i>
65	CHAPTER I Physical constants in other Universes Purpose and abstract, 65– <i>Introduction relative to our universe</i> , 67 – 1.1. Decrease of the velocity of light over time, 68 – 1.2. Increase of the Radius of the Earth over time, 70 – 1.3. Comparison, to date, between the universal constants of the younger universe U_i and those of our uni- verse U , 71 – 1.3.1. <i>Speed of light c</i> , 71 – 1.3.2. <i>Gravitational constant G</i> , 71 – 1.3.3. <i>Dielectric constant in vacuum ϵ_0</i> , 72 – 1.3.4. <i>Electron radius R_e (and similarly proton radius)</i> , 72 – 1.3.5. <i>Electron mass (and similarly proton mass)</i> , 73 – 1.3.6. <i>Electron charge e</i> , 73 – 1.3.7. <i>Wavelength λ of the Photon</i> , 74 – 1.3.8. <i>Period T of the Photon</i> , 74 – 1.3.9. <i>Energy $E=mc^2$</i> , 75 – 1.3.10. <i>Planck constant $h=E/f=ET$</i> , 75 – 1.3.11. <i>Magnetic permea- bility in vacuum μ_0</i> , 75 – 1.3.12. <i>Gravitational Planck's constant hg</i> , 76 – 1.3.13. <i>Boltzmann constant k and absolute temperature T_a</i> , 76 – 1.3.14. <i>Stefan–Boltzmann constant σ</i> , 78 – 1.3.15. <i>Fine structure constant $\alpha=1/137$</i> , 79 – 1.3.16. <i>Fine structure constant α^*</i> , 80 – 1.3.17. <i>Gravita- tional time constant τ</i> , 81 – 1.3.18. <i>Black body constant $a = 4 \sigma/c$</i> , 82 – 1.3.19. <i>Gravitini emission constant k_{ng}</i> , 82 – 1.3.20. <i>Radius of the hydrogen atom</i> , 82 – 1.3.21. <i>Ratio between electron radius R_e and hydrogen atom radius r_H</i> , 83 – 1.3.22. $k_{\alpha i}$, 84.

87 CHAPTER II

Axions

Purpose and summery, 87 – 2.1. Introduction, 87 – 2.2. Energy of a Photon with wavelength λ , 88 – 2.3. Axions, 91.

93 CHAPTER III

Entropy, temperature, gravitational and electromagnetic potential energy, kinetic energy and radius of a Black Hole

Purpose and summery, 93 – 3.1. Entropy, 93 – 3.2. Temperature, 94 – 3.3. Gravitational and electromagnetic potential Energy, 95 – 3.4. Radius, 96 – 3.5. Criticality, 97 – 3.5.1. *Case 0 – general*, 97 – 3.5.2. *Case 1 – protons*, 98 – 3.5.3. *Case 2 – electrons*, 99 – 3.5.4. *Case 3 – protons and electrons*, 100 – 3.6. Calculus of the Entropy of a Black Hole, 102 – 3.7. Partial contraction of a Galaxy for Black Hole, 102.

105 CHAPTER IV

Universe energy

Purpose and summery, 105 – 4.1. Total Energy of the Universe, 105 – 4.2. Gravitational background Energy, 106.

109 CHAPTER V

Universe background energy after Big Bang

Purpose and summary, 109 – 5.1. Electromagnetic background Energy of the Universe, 109 – 5.2. Gravitational background Energy of the Universe, 110.

113 CHAPTER VI

Physical parameters of the stars

Purpose and summery, 113 – 6.1. Change in Volume, Temperature, pressure, density and Power of a bright heavenly body (stellar structure) to vary its mass, 113 – 6.1.1. *Equation Of State Of The Star*, 116 – 6.1.2. *Power E_r ' Radiated From A Star In Function Of Its Mass M* , 120 – 6.1.3. *Power E_r ' Radiated From A Star In Function Of Its Mass M* , 124 – 6.1.4. *Power E_r ' Radiated From A Star In Function Of Its Mass M* , 130 – 6.2. Relationship between the internal temperature T and the surface temperature T_s of a star, in equilibrium conditions, 132 – 6.3. Evolution time of a star as a function of its mass, 133 – 6.3.1. *Case a)*, 133 – 6.3.2. *Case b)*, 134 – 6.3.3. *Case c)*, 134.

- 137 CHAPTER VII
Energy and light efficiency
Purpose and summery, 137 – 7.1. Luminous efficiency of incandescent lamps, 137 – 7.2. Luminous efficiency of stars, 142 – 7.3. Design of the filament of an incandescent lamp of power $P=100$ W, 144 – 7.4. Electron linear accelerator, 146.
- 147 CHAPTER VIII
Earth–Moon system energy over time
Purpose and summery, 147 – 8.1. Energy of the Eart–Moon system, 147 – 8.2. Energy of the Eart–Moon system over time, 151.
- 155 CHAPTER IX
Wind energy on Earth
Purpose and summery, 155 – 9.1. Kinetic Energy of the wind on Earth, 155 – 9.2. Annual Energy of the wind on Earth, 156 – 9.3. Air heat, 156.
- 159 CHAPTER X
Sun–Earth parameters
Purpose and summery, 159 – 10.1. Solar system parameters, 159 – 10.2. Gravity, 161 – 10.3. Escape velocity, 161 – 10.4. Equivalent Temperature T_e , 161.
- 163 CHAPTER XI
Solar magnetic field
Purpose and summery, 163 – 11.1. Solar magnetic field, 163 – 11.2. Deviation of charge particles (p,e) outgoing from the Sun, 166 – 11.3. Life in star system, 168.
- 169 CHAPTER XII
Earth's magnetic field
Purpose and summery, 169 – 12.1. Magneti field, 169 – 12.2. Earth's magnetic field, 171 – 12.3. Gravitational, electromagnetic and centrifugal Forces, 173 – 12.4. Calculus of pressure inside the Earth, 175.
- 179 CHAPTER XIII
Earth–Mars planets over time
Purpose and summery, 179 – 13.1. Physical parameters of the Planets of the solar system, 179 – 13.2. Corpuscular theory of gravitation, 180 – 13.3. Earth–Sun and Mars–Sun distances over time, 182.

- 185 CHAPTER XIV
Planet from the Sun and cooling time
Purpose and summery, 185 – 14.1. Creation of a Planet by the Sun, 185 – 14.2. Cooling time of a Planet, 188.
- 191 CHAPTER XV
Moon luminous flux
Purpose and summery, 191 – 15.1. Luminous flux of the Moon, 191.
- 193 CHAPTER XVI
Maximum height H of the mountains on the Planets and the related geological times of formation
Purpose and summery, 193 – 16.1. Gravitational energy, 193 – 16.2. Rotational kinetic energy, 194 – 16.3. Maximum height h of the mountains on the Planets, 195 – 16.4. Maximum height h of the mountains on Earth, 196 – 16.5. Geological Period T_g of formation of mountains on Earth, 197.
- 199 CHAPTER XVII
CO₂ in the World
Purpose and summery, 199 – 17.1. Features of the Earth, 199 – 17.2. Order of magnitude of the number of beings that inhabit the Earth, 200 – 17.3. Number of terrestrial beings that inhabit the Earth, 200 – 17.4. Number of marine creatures that inhabit the oceans, 201 – 17.5. CO₂ produced by man, 201 – 17.6. CO₂ produced on Earth by animal beings, 203 – 17.7. CO₂ produced in the seas by the marine animals, 203 – 17.8. CO₂ produced by volcanoes and from the cracks of the Earth's crust under the oceans, 204 – 17.9. CO₂ from industrial activities, 204 – 17.10. Total CO₂ produced worldwide in a year, 205.
- 207 CHAPTER XVIII
Electromagnetic whirlwind
Purpose and summery, 207 – 18.1. Introduction, 207 – 18.2. Classical centrifugal Force, 208 – 18.3. Centrifugal Force of Coriolis, 209 – 18.4. Electromagnetic Force, 210 – 18.5. Ratio between electromagnetic Force and Coriolis Force, 212 – 18.6. Ratio between centrifugal Force and electromagnetic Force, 213 – 18.7. Magnetic field, 213 – 18.8. Density ρ_e of electrified water molecules and charge Q_e , 213 – 18.9. Maximum charge Q_t to have $F_c = F_{em}$, 214 – 18.10. Small diameters of only electromagnetic whirlwinds, 215 – 18.11. Calculation of the total electric charge Q_f of a lightning, 216.

- 217 CHAPTER XIX
 Scenario of changes (upheavals) in terrestrial atmospheric mass
 Purpose and summery, 217 – 19.1. Thermodynamic model of the Earth, 217 – 19.2. Parameters and physical quantities of the Earth's atmosphere, 218 – 19.3. Molecular densities of the Earth's atmosphere, 219 – 19.4. Heat Fluxes and thermodynamic equilibrium of the Earth, 220 – 19.4.1. *Heat Fluxes*, 220 – 19.4.2. *Thermodynamic equilibrium*, 221 – 19.5. Situation of some parameters of the Earth's atmosphere to date, 222 – 19.6. Situation of some parameters of the Earth's atmosphere after cataclysm, 223.
- 229 CHAPTER XX
 Oil in the World
 Purpose and summery, 229 – 20.1. World oil, 229.
- 231 CHAPTER XXI
 Aerodynamic stability of the Messina bridge deck
 Purpose and summery, 231 – 21.1. Aerodynamic actions on the deck, 231.
- 233 CHAPTER XXII
 Japan superfast train
 Purpose and summery, 233 – 22.1. Propulsive Power P_p , 233 – 22.2. Levitation Power P_l , 234 – 22.3. Times, 236 – 22.4. Costs, 236 – 22.5. Electromagnetic calculation of the levitation Power P_l – 22.6. Calculus of the current density j_{sup} in the superconductor, 242.
- 245 CHAPTER XXIII
 Radiation dose effect on the molecules and genes in the DNA of the human body
 Purpose and summery, 245 – 23.1. Molecules and genes in the DNA, 245 – 23.2. Breakage of molecules and genes of the DNA by radiation, 247.
- 249 CHAPTER XXIV
 World curiosity
 Purpose and abstract, 249 – 24.1. Water, 250 – 24.2. Light, 251 – 24.3. Electricity, 252 – 24.4. CO_2 , 254 – 24.5. Global computer Memory, 256 – 24.6. Electrified cloud, 256 – 24.7. Solar magnetic field, 258 – 24.8. Life star systems, 261 – 24.9. Annual Energy available from the wind in the world, 261.

263 CHAPTER XXV

Cask fall

Purpose and summery, 263 – 25.1. Premise, 263 – 25.2. Scheme of cask falling from height H , 264 – 25.3. Compression stresses on the cask at the end of fall to the ground from height H , 264 – 25.4. Equation of conservation of the fall potential energy and calculus of the acceleration a in elastic condition, 267 – 25.5. Equation of conservation of the fall potential Energy and calculus of the acceleration a in breakage condition, 267.

271 CHAPTER XXVI

Eurodif: horizontal diffuser stability

Purpose and summery, 271 – 26.1. Introduction, 271 – 26.2. Static stresses on the metal container, 273 – 26.3. Dynamic stresses on the metal container, 274 – 26.4. Accelerations, 276 – 26.5. Height H , 277.

279 CHAPTER XXVII

Production of lava in the World

Purpose and summery, 279 – 27.1. Introduction, 279 – 27.2. Nuclear fission Reactors in the world, 280 – 27.3. Natural nuclear fission Reactor in the depths of the Earth, 280 – 27.4. Amount of lava, 281.

283 CHAPTER XXVIII

Equivalent temperature for stars and galaxies

Purpose and summery, 283 – 28.1. Equivalent Temperatures in the solar system, 284 – 28.2. Equivalent Temperatures in the star system, 286 – 28.3. Equivalent Temperatures in the galactic system, 287.

289 CHAPTER XXIX

Time travel

Purpose and summery, 289 – 29.1. Energy E of the Universe U , 289 – 29.2. Entropy S of the Universe U , 290.

291 CHAPTER XXX

Compressed air cooler

Purpose and summery, 291 – 30.1. Introduction, 291 – 30.2. Process, 293 – 30.3. Pressure, 295 – 30.4. Temperatures, 296.

- 299 CHAPTER XXXI
Explosives
Purpose and abstract, 299 – 31.1. Introduction, 299 – 31.2. Pressure and Temperature of detonation, 300 – 31.3. Rate of explosion, 301 – 31.4. Pressure at a distance R from the explosion point, 301 – 31.5. Air velocity at a distance R from the explosion point, 302 – 31.6. Thrust upon man at a distance $R=10$ m from the explosion point, 302.
- 307 CHAPTER XXXII
Radiated electromagnetic power from accelerated electric charge
Purpose and abstract, 307 – 32.1. Introduction, 307 – 32.2. Power of an electron with velocity v , 308 – 32.3. Power P radiated by an accelerated electron, 308.
- 311 CHAPTER XXXIII
Plan of Being
Purpose and summery, 311 – 33.1. Plan of BEING, 311 – 33.2. Elementary Particles of the Universe, 312.
- 315 CHAPTER XXXIV
Information of the universe
Purpose and summery, 315 – 34.1. Mass M_u and existence's time T_u of the Universe, 315 – 34.2. Atoms of the Universe, 316 – 34.3. Information of the Universe, 316.
- 317 CHAPTER XXXV
Greenhouse effect: gross analysis
Purpose and summery, 317 – 35.1. Parameters of the thermodynamic system of the Earth, 317 – 35.2. Thermodynamic equilibrium of the Earth, 318 – 35.3. Average secular variation in global temperature, 319 – 35.4. Maximum secular variation in ocean levels, 320.
- 321 CHAPTER XXXVI
Magnet
Purpose and summery, 321 – 36.1. Magnetic field of a magnet, 321 – 36.2. Electromagnetic force between two equal magnets, 322.
- 325 CHAPTER XXXVII
Information
Purpose and contents, 325 – 37.1. Generality, 325 – 37.2. Information in a thermodynamic process in equilibrium, 325 – 37.3. Information in a crystal, 326.

327 CHAPTER XXXVIII

Maximum Black Hole

Purpose and contents, 327 – 38.1. Introduction, 327 – 38.2. Relationship mass M – radius R of a Black Hole, 328 – 38.3. Maximum mass of a Black Hole, 328 – 38.4. Density of saturation gravitational energy, 329 – 38.5. Average gravitational energy density in the Universe, 329 – 38.6. Gravitation energy density near a neutron, 330 – 38.7. Electromagnetic and gravitational Planck length, 330.

331 CHAPTER XXXIX

Period and length of the graviton

Purpose and contents, 331 – 39.1. Introduction, 331 – 39.2. Period and length of a graviton, 332.

335 CHAPTER XL

Earth energies

Purpose and contents, 335 – 40.1. Introduction, 333 – 40.2. Earth's massive Energy E , 336 – 40.3. Earth's gravitational Energy E_g , 336 – 40.4. Energy (heat) E_i developed within the Earth in one year, 336 – 40.5. Gravitational energy change ΔE_g in one year, 337 – 40.6. Kinetic Energies E_{kriv} and E_{krot} of Earth, 337 – 40.7. Sun–Earth gravitational Energy, 338 – 40.8. Energy of one million nuclear bombs of 10 kton, 338 – 40.9. Energy produced by 1000 GWe nuclear power plants per year, 339.

341 CHAPTER XLI

Maximum height h of the atmosphere on the planets

Purpose and summery, 341 – 41.1. Introduction: maximum height h of the mountains on Earth, 341 – 41.2. Maximum height h of the atmosphere on the Planets, 342 – 41.3. Maximum height h of the Earth atmosphere, 343 – 41.4. Condition to have equal maximum heights of the mountains and the atmosphere on the Planets, 343.

345 CHAPTER XLII

Motion of Madagascar from Africa

Purpose and summery, 345 – 42.1. Gravitational premise theorized by Author, 345 – 42.2. Results resulting from the heuristic model of gravitation, 346 – 42.2.1. *Physical aspects*, 346 – 42.2.2. *Geological aspects*, 347 – 42.3. Motion of Madagascar from Africa, 348.

349 CHAPTER XLIII

The interaction of cosmic rays on the Earth's climate

43.1. Cloud formation from cosmic rays, 350 – 43.2. Contribution of cosmic rays to variations in the Earth's magnetic field, 352 – 43.2.1. *Variation of the Earth's magnetic field due to electric charges in the atmosphere produced by cosmic rays*, 355 – 43.3. Contribution of cosmic rays to lightning variations, 357 – 43.3.1. *Electric charge stored on a cloud*, 358 – 43.3.2. *Electric charge associated with a lightning strike*, 359 – 43.3.3. *Ratio R between the total electric charge Q that can be stored on a cloud and the portion of it that is discharged to the ground during a lightning strike*, 359 – 43.3.4. *Ratio between the share of lightning strike produced by cosmic rays and the share of lightning strikes produced by rubbing of the clouds*, 359.

361 CHAPTER XLIV

Relations between universal constant and in particular between the fine structure constant A , $K=D/\Lambda$ Of A Photon, $T_{e,spin}$, T_e , H_g , X And F_{ep}

44.1. Fine structure constant $\alpha=1/137$, 361– 44.2. Radius of the hydrogen atom, 361 – 44.3. Ratio between electron radius R_e and hydrogen atom radius r_H , 362 – 44.4. Relationship between the fine structure constant α and $k=D/\lambda$ of a photon, 363 – 44.5. Radius of the stellar system of mass M , 364 – 44.6. Ratio between $T_{e,spin}$ and τ_e , 367 – 44.7. Relation between the ratio h_g/h and the product $\chi \cdot F_{ep}$ between the gravitational constant and the electric force in the proton, 368 – 44.8. Calculation of R_e , $T_{e,spin}$ and τ_e , 369.

371 CHAPTER XLV

Hydrogen

Purpose and summary, 371 – 45.1. Energy of chemical bonds in molecules CH_4 , H_2O , CO_2 , O_2 , NH_3 , 371 – 45.2. Energy efficiency of Hydrogen (H_2) production from water (H_2O), 372 – 45.3. Energy efficiency of hydrogen (H_2) production from methane (CH_4), 372 – 45.4. Energy efficiency of hydrogen (H_2) production from Ammonia (NH_3), 373 – 45.5. Energy efficiency of hydrogen (H_2) production, 373 – 45.6. The order of magnitude of the calorific value of methane (CH_4), 374.

375 CHAPTER XLVI

Earth-like star parameters

Purpose and summary, 375 – 46.1. Solar System Parameters, 375 – 46.2. Parameters of a stellar System with an Earth-like Planet, 377.
